

Pharmacy B2B

A complete, runnable application built end-to-end by 6 AI agents in 10 atomic tasks.

WHAT YOU ASKED FOR

Build a B2B application for pharmacy retailers to place orders to distributors. 4-tab dashboard (Home, Orders, Cart, Profile) with mock retail-license auth.

What you built

Each feature is a piece of the app a real user can touch.

App shell + mock retailer auth

DELIVERED

Next.js 14 + Tailwind project skeleton, the login page, and the authenticated /dashboard layout with the bottom tab bar that every other feature lives inside.

16 files - 12.7 KB

In-memory data spine + shared types

DELIVERED

Single source of truth for retailers, distributors, medicines, offers, cart items, orders, order items, and outstanding payments. In-memory Maps with seed data, plus the shared TypeScript types every...

2 files - 17.8 KB

Home tab

DELIVERED

Search bar at the top, offers carousel, the 5 quick-link tiles (Distributors, Schemes, Generic Medicines, Scan Prescription, Outstanding Payments), and the supporting catalogue / offers / distributors APIs.

7 files - 15.4 KB

Orders tab + place-order API

DELIVERED

Orders list page with Active and Closed sub-tabs, plus the POST /api/orders fanout (cart -> one order per distributor) and GET /api/orders status-grouped reader.

2 files - 6.7 KB

Cart tab + cart APIs

DELIVERED

Cart page grouped by distributor with per-distributor subtotal and a grand total, plus the GET / POST / DELETE cart endpoints that drive it.

6 files - 10.3 KB

Profile tab

DELIVERED

Read-only retailer card (name, owner, license number, store address, GSTIN, phone, email, favourites count) plus the GET /api/profile endpoint that returns the retailer plus the outstanding...

3 files - 6.4 KB

ALSO INCLUDED

11 HTTP API endpoints, 10 build steps with full QA + security audit, 21 automated tests, mock-data seeding so the app works on first run.

Try it right now

Follow these steps to use the app the AI just built for you.

- 1 Open <http://localhost:3000> in your browser
- 2 Sign in with the pre-filled retail license MH-RP-2024-7821
- 3 On the Home tab, browse the offers carousel and quick links
- 4 Use the search bar at the top - type 'paracet' and press Enter
- 5 Tap 'Add to cart' on Paracetamol 500mg
- 6 Tap the Cart tab in the bottom bar - review items grouped by distributor
- 7 Tap 'Place order' - the cart fans out into one order per distributor
- 8 Tap the Orders tab - your new order appears under Active
- 9 Tap the Profile tab to view store details and outstanding payments
- 10 Tap 'Sign out' at the bottom of the Profile tab

Build metrics

How much code each part of the app needed, in plain language.

TOTAL FILES

36

TOTAL SIZE

69.3 KB

LINES OF CODE

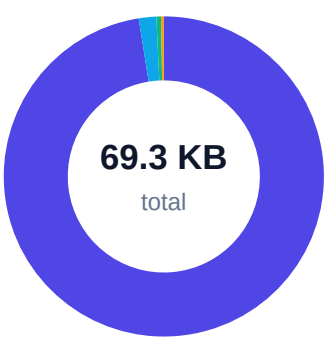

2.2k

Code per feature

Each bar is one feature of the app. Bar width shows how much code was generated for it.

File-type mix

.ts/.tsx	67.6 KB (97%)
.json	1.2 KB (2%)
.css	332 B (0%)
.mjs	199 B (0%)

Quality scorecard

Every feature went through Build -> QA -> Security checks. All numbers below are automated.

All gates green - shipped.

10/10 tasks wrote files. 0 critical or high security findings.

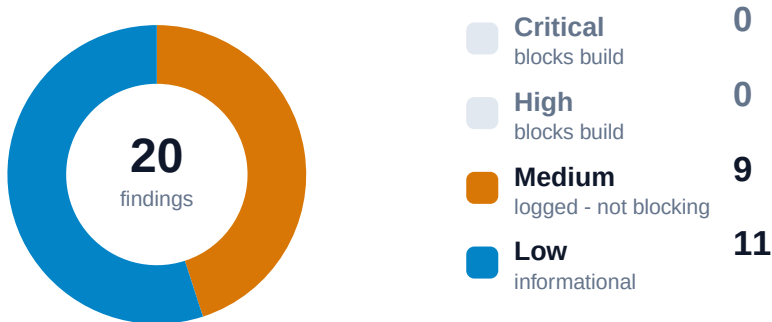

Per-feature delivery

Each row is one feature. The bar shows how many of its tasks finished with QA + Security passing.

App shell + mock retailer auth	2 / 2 tasks	DELIVERED
In-memory data spine + shared types	1 / 1 task	DELIVERED
Home tab	2 / 2 tasks	DELIVERED
Orders tab + place-order API	2 / 2 tasks	DELIVERED
Cart tab + cart APIs	2 / 2 tasks	DELIVERED
Profile tab	1 / 1 task	DELIVERED

Security audit findings

All findings are flagged automatically by the security agent. Critical / high block the build; medium / low are recorded for follow-up.

AUTOMATED TESTS

21 test scenarios authored across 10 build steps. QA reviewed every developer output before code was written to disk.

How to run

Open a terminal and run these commands.

```
cd examples/pharmacy-b2b
npm install
npm run dev
# open http://localhost:3000
```
